FILE

DATE: JANUARY 30, 1990
TO: MYRON SALO
FROM: RUSS KORVOLA
SUBJECT: TERMINAL 4 PCBs

This memo is in response to the questions raised in your memo of January 23, 1990.

1. According to Tom Peterson, the project engineer for the removal of the PCB transformers, the material should be removed some time in February or March. Delays in signing a contract with GE have pushed out the removal date longer than anticipated.
2. The Port has requested that W.R. Grasle have their environmental cleanup contractor remove these drums from T-4, but so far we have received no response. A followup inquiry will be made with Grasle.
3. The electrical substation at T-4 which was the site of the PCB release involving W.R. Grasle has undergone a substantial amount of cleanup. However, closure of the cleanup process has not yet been accomplished. At this time, the EPA regional office in Seattle is reviewing the Port's proposal for final cleanup procedures for the facility.

Until this proposal is accepted and the procedures completed, the site should continue to be considered a "PCB-contaminated" site. This status requires that any personnel working in the area wear appropriate protective gear, such as coveralls and boot covers. They must also insure that their activities do not cause any damage to the contaminated surfaces. If this sort of work must be done, additional protective measures will be required.

There is no schedule established for completion of the cleanup procedures. When this is determined, I will let you know.

If you have any questions or require additional information, please contact me on extension 608.
